## What is the Google Apps CC Sync?

Consider power users in terms of number of emails received. These users are recommended to have the outlook configured with POP with emails downloaded should be deleted on the Google Servers. By doing this, the email quota of the user never gets full on the server which is 25GB. More over, it comes with a problem of Contacts & Calendar as POP protocol does not sync contacts & Calendar. Specially global contacts become a challenge and multiple calenders also becomes a challenge.

CloudCodes introduces a simple to use solution for the above mentioned challenge, Google Apps CC Sync. Google Apps CC Sync is an efficient tool which securely synchronises the user's personal, global and shared contacts as well as the global contacts and shared contacts of Google Apps. The tool also syncs multiple calendars that he/she may be using without the hassle of the multiple profiles that are created by the Outlook Sync tool.

---

## How it Works

- The Google Apps CC Sync client is installed on the user's machine
- The tool syncs all the groups on contacts which users have create apart from default like My Contacts
- A Desktop Tool runs automatically as a service in the system tray
- Users can update the User Account Details, Pause the Sync, Sync Now.
- The Contacts appear in different groups as My Contacts

---
